```

project brief:

Create a portfolio website to showcase my design projects, send to prospective employers and clients, and learn basic Front-end Development in the process.

context:

As a finishing step in my [CareerFoundry](#) UI Design program, I took a class to further my expertise called “Frontend Development for Designers,” providing hands-on training and step-by-step lessons of building a website with HTML, CSS, and Javascript.

Learning about front-end development helps me improve my creative process, communicate better with web developers, and coordinate cross team projects. It also gives me the knowledge I need to make websites for small businesses or edit the code on existing ones!

goals:

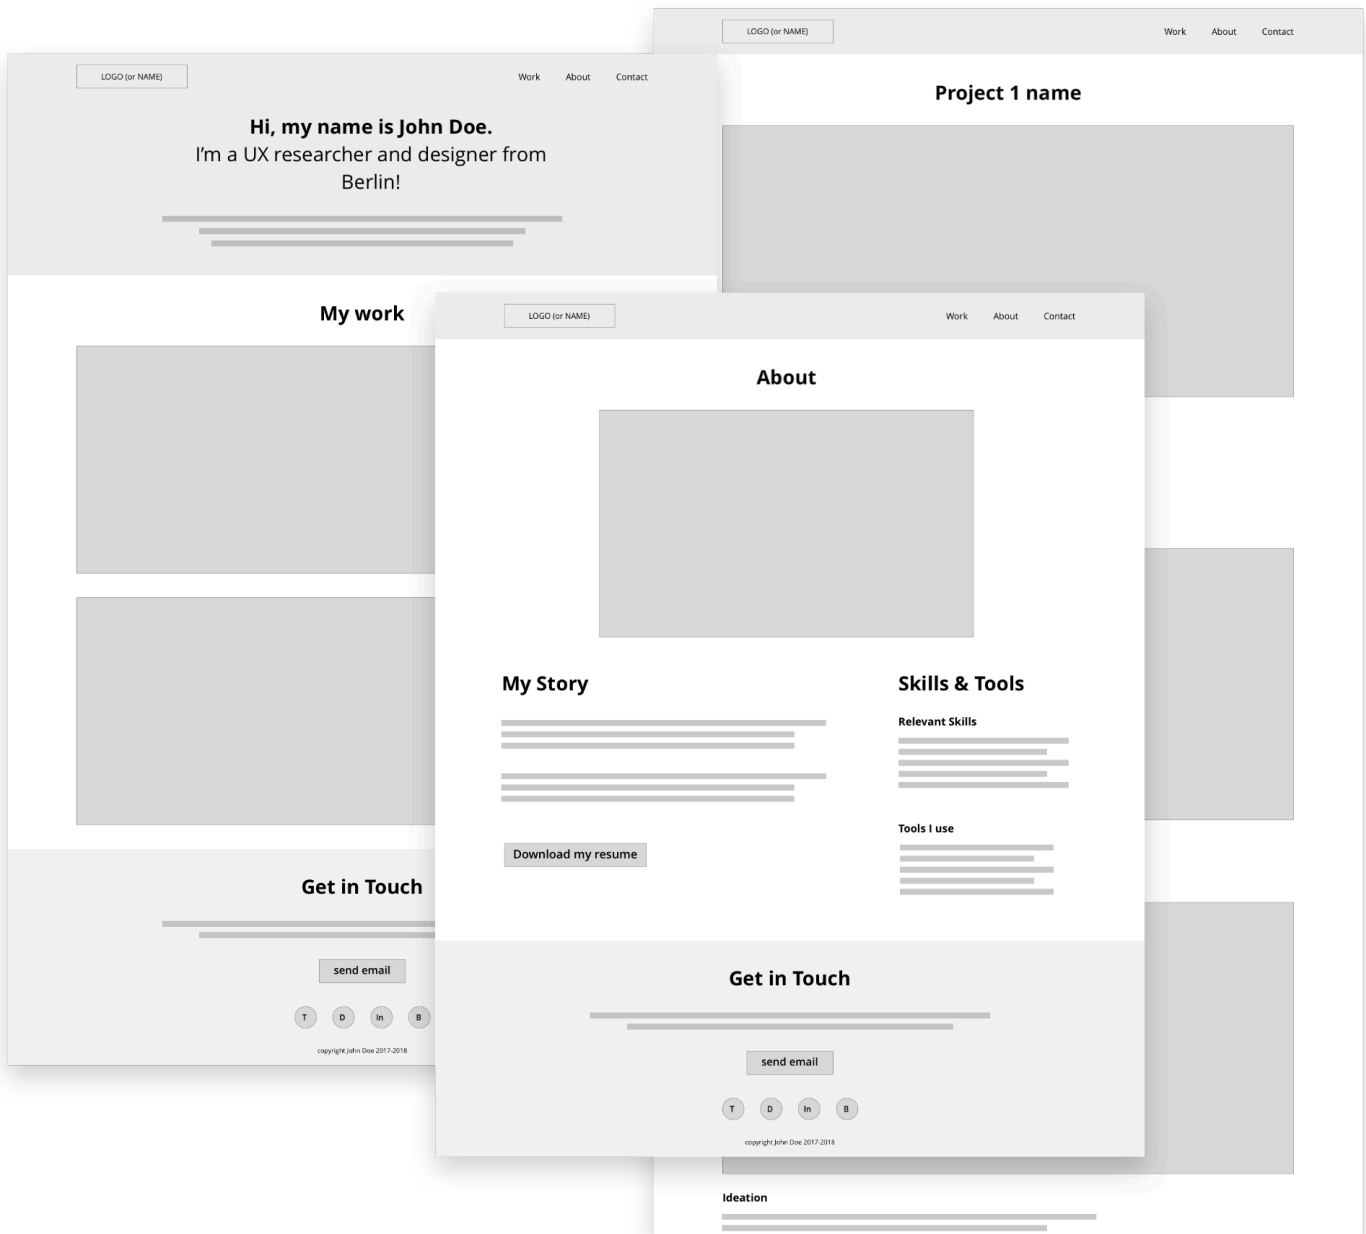

- 1. Design a fully-functional portfolio website hardcoded from scratch** without the use of CMS (Content Management Systems such as Wordpress or Wix)
- 2. Study the fundamentals of front-end development** descriptive languages (HTML, CSS) and programming languages (Javascript and jQuery).
- 3. Apply core skills such as building responsive layouts**, meeting accessibility requirements, and debugging a website.
- 4. Add interactive & animated elements** to the site to grab attention.
- 5. Curate and edit interesting, insightful case studies** for each portfolio project.
- 6. Create a polished, visually appealing site** that puts my work in its best light.

process:

Here are the step-by-step tasks to develop the site:

Exercise 1: Getting Started

1. Identify user goals
2. Select projects to showcase
3. Decide on basic structure of website

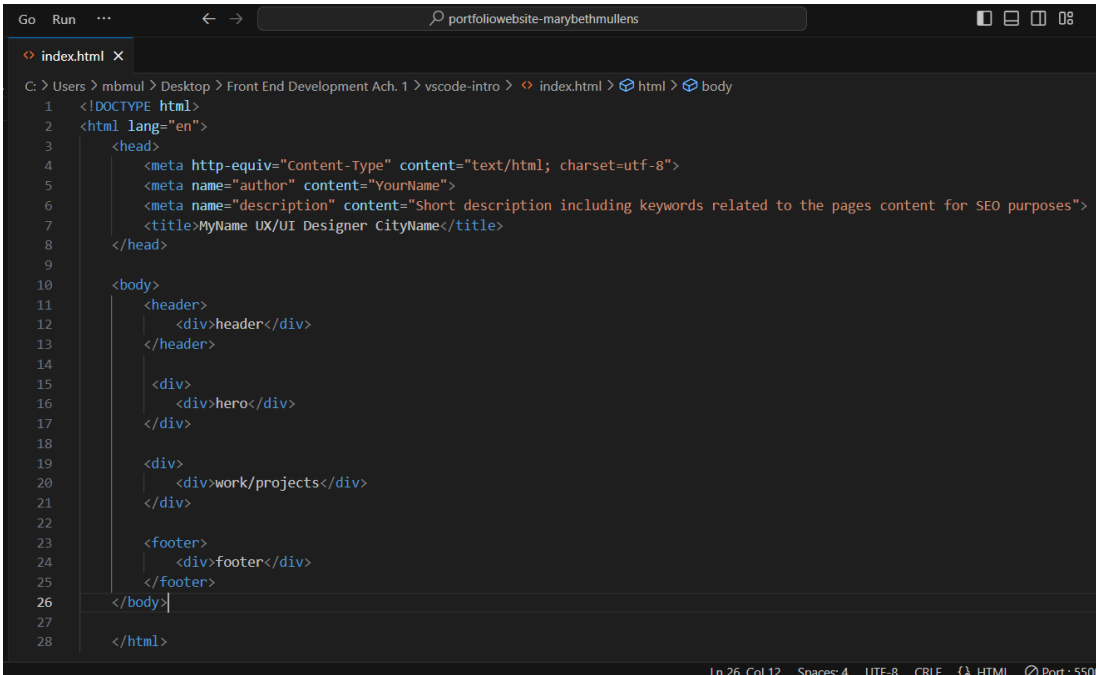

4. Draft copy for website
5. Select fonts and colors.

Primary color for website: Hex #4ca0a4	Primary font for website: Playfair	Secondary font: Poppins
--	--	-----------------------------------

Exercise 1.2: Internet & the Web

1. Create a root folder for website
2. Open folder in the code editing program **Visual Studio (VS) Code**
3. Create the default "index.html" template
4. Fill in basic code for <head> and <body>

```
1 <!DOCTYPE html>
2 <html lang="en">
3   <head>
4     <meta http-equiv="Content-Type" content="text/html; charset=utf-8">
5     <meta name="author" content="YourName">
6     <meta name="description" content="Short description including keywords related to the pages content for SEO purposes">
7     <title>MyName UX/UI Designer CityName</title>
8   </head>
9
10  <body>
11    <header>
12      <div>header</div>
13    </header>
14
15    <div>
16      <div>hero</div>
17    </div>
18
19    <div>
20      <div>work/projects</div>
21    </div>
22
23    <footer>
24      <div>footer</div>
25    </footer>
26  </body>
27 </html>
```

Exercise 1.3: Starting with HTML

1. Create structure for website with folders for CSS, Javascript and images
2. Write HTML code for the main sections of the website home page:

<hero> <featured work> and <footer>

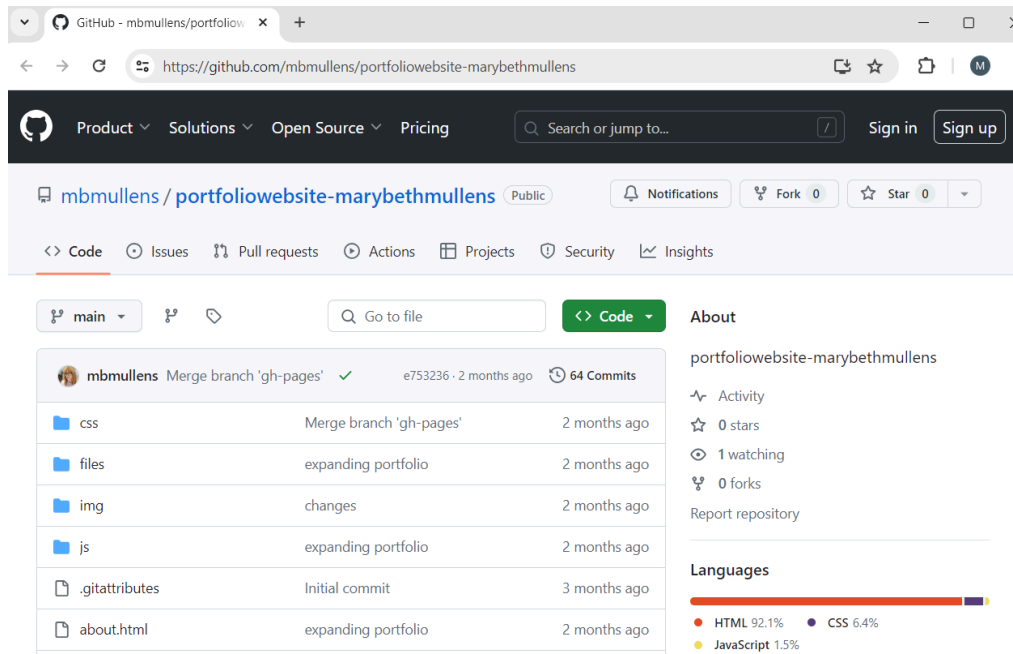

Exercise 1.4: Coding with HTML

1. Make a "files" folder to structure & add pdf resume to it
2. Create folders for case studies and add images
3. Write HTML code for <header> and <nav> sections of home page
4. Add images to home page
5. Insert icons and <a> links for LinkedIn and Behance
6. Create "about.html" and "contact.html" page with basic <head> and <body>

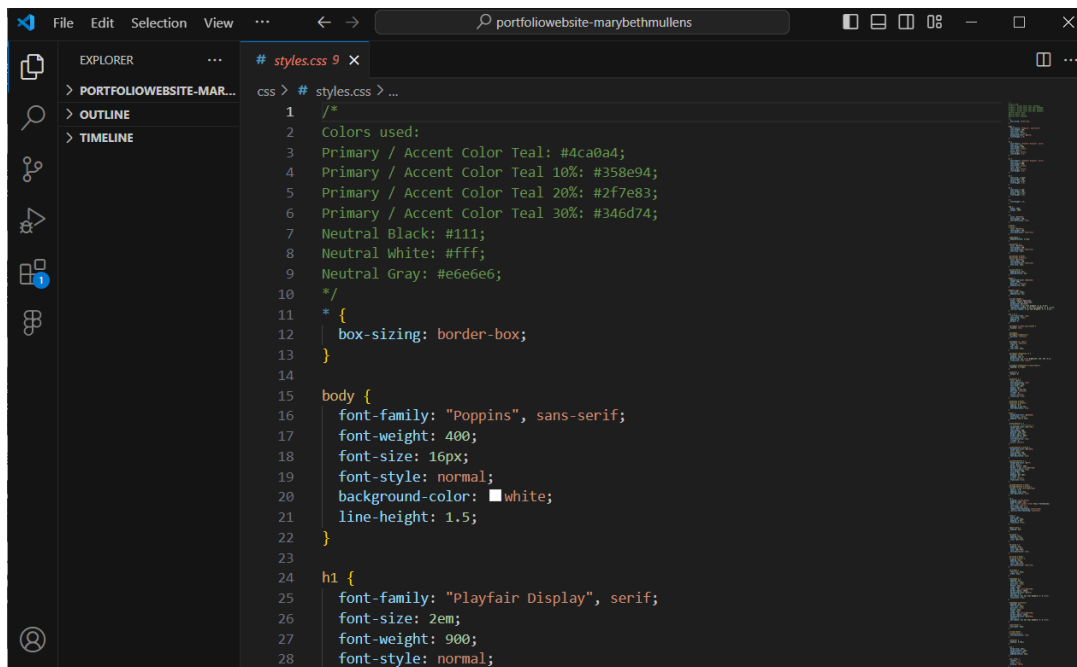

Exercise 1.5: Using GitHub for Your Projects

1. Publish VSCode local repository to online repository on GitHub
2. Push and commit changes to GitHub for review

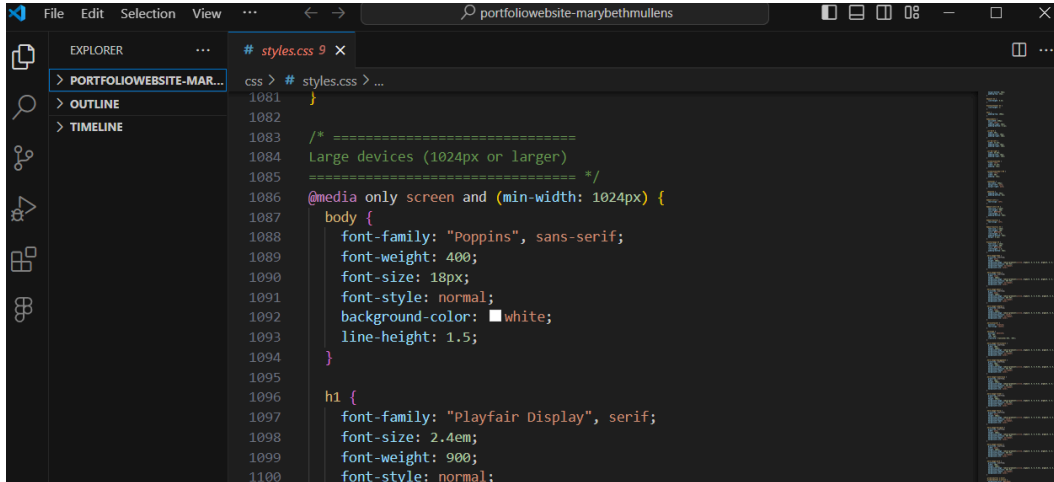

Exercise 1.6 – CSS Basic Syntax & Styling

1. Add unique IDs to each HTML block
2. Add viewport meta tag
3. Create file "style.css" & link to each HTML file
4. Add initial CSS (colors, font stylings, button stylings, image width)

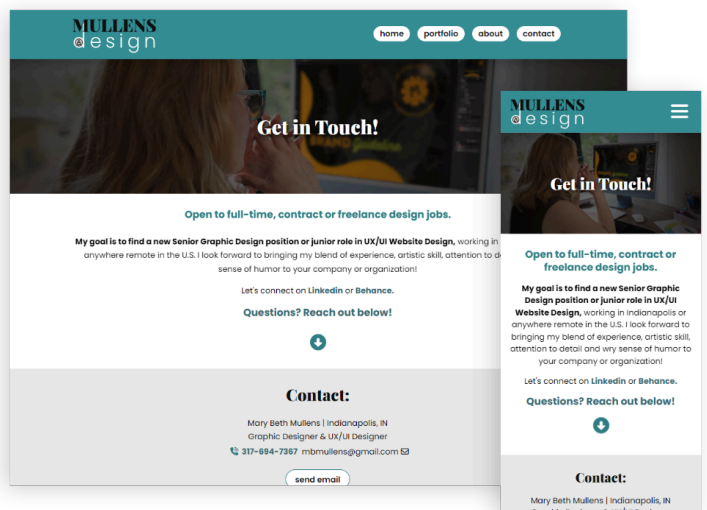

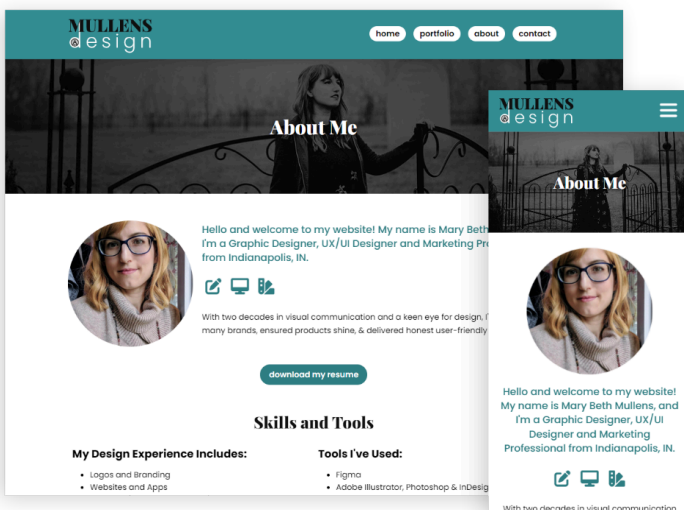

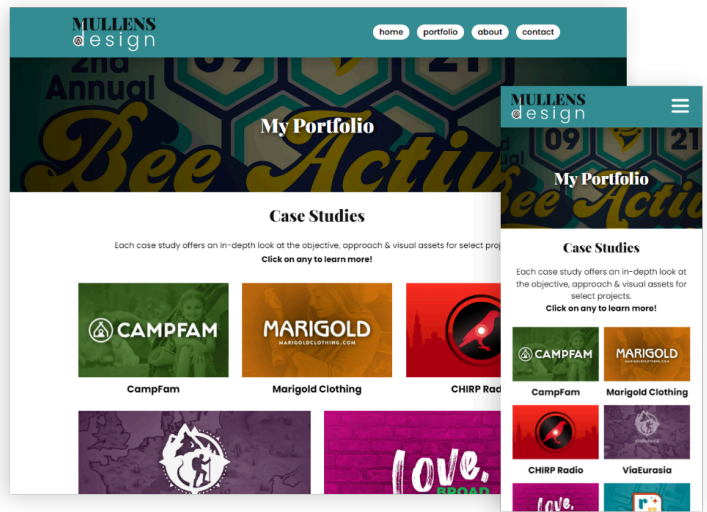

Exercise 1.7- CSS Responsive Layouts

1. Create more detailed layout styling for each page
2. Add media queries for your breakpoints
3. Add code inside of your media queries to ensure your site is responsive

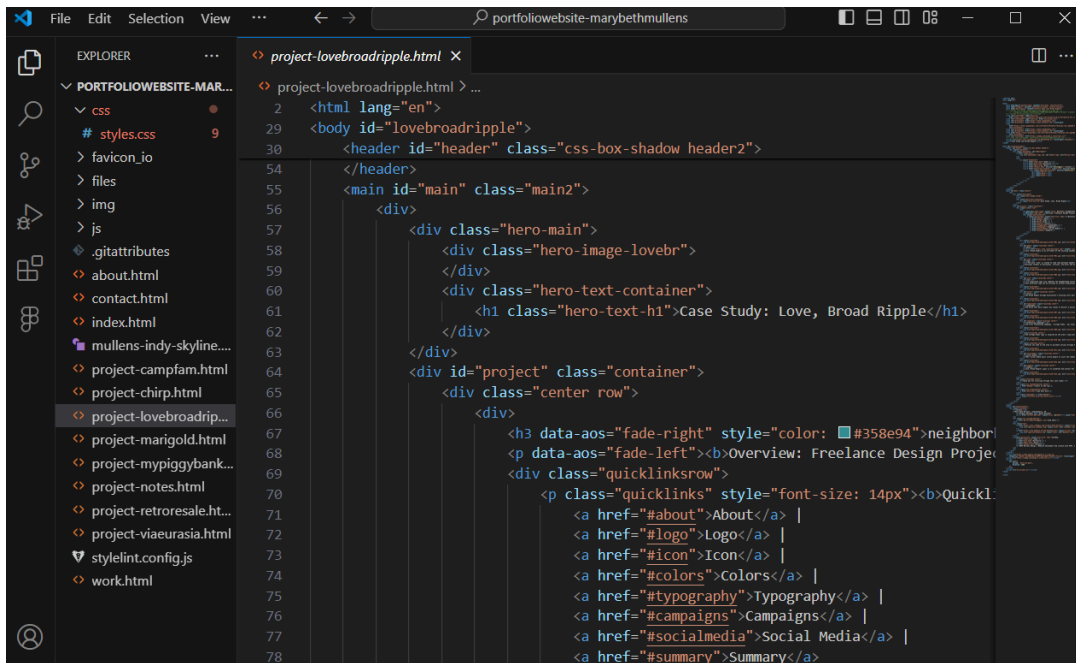

```
File Edit Selection View ... <-> portfoliowebsite-marybethmullens
# styles.css 9
css > # styles.css > ...
1081 }
1082
1083 /* =====
1084 Large devices (1024px or larger)
1085 ===== */
1086 @media only screen and (min-width: 1024px) {
1087   body {
1088     font-family: "Poppins", sans-serif;
1089     font-weight: 400;
1090     font-size: 18px;
1091     font-style: normal;
1092     background-color: #white;
1093     line-height: 1.5;
1094   }
1095
1096   h1 {
1097     font-family: "Playfair Display", serif;
1098     font-size: 2.4em;
1099     font-weight: 900;
1100     font-style: normal;
```

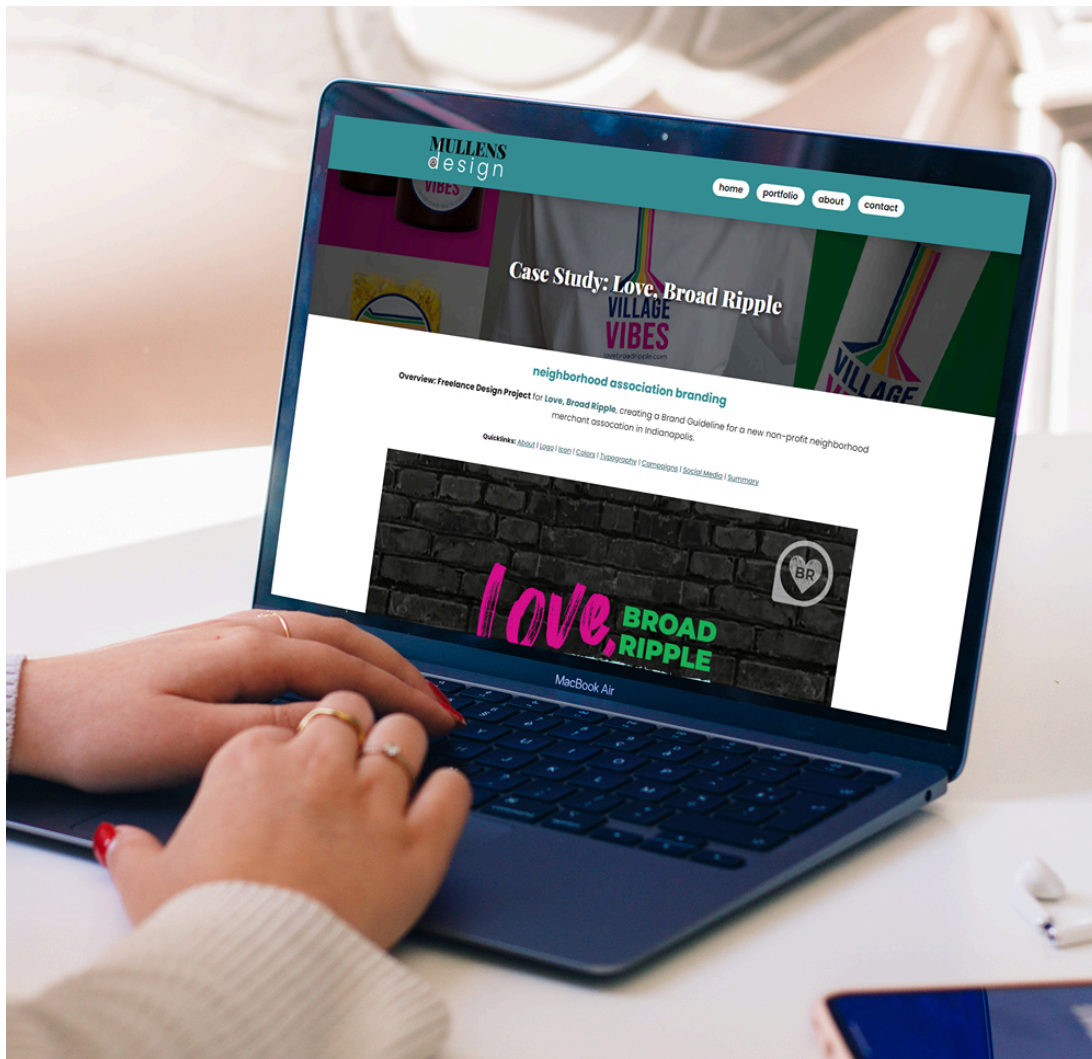

4. Code HTML pages for each case study design project

5. Add CSS style to each project page

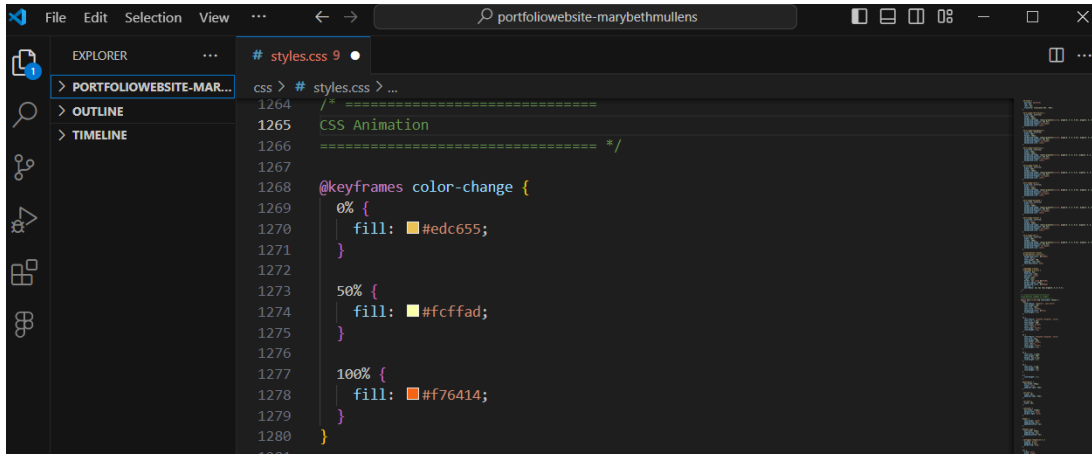

```
File Edit Selection View ... portfoliowebsite-marybethmullens

Exercise 1.8 – Advanced CSS for Designers

1. Add CSS animations and transitions to the website
2. Design & code MullensDesign.com animation

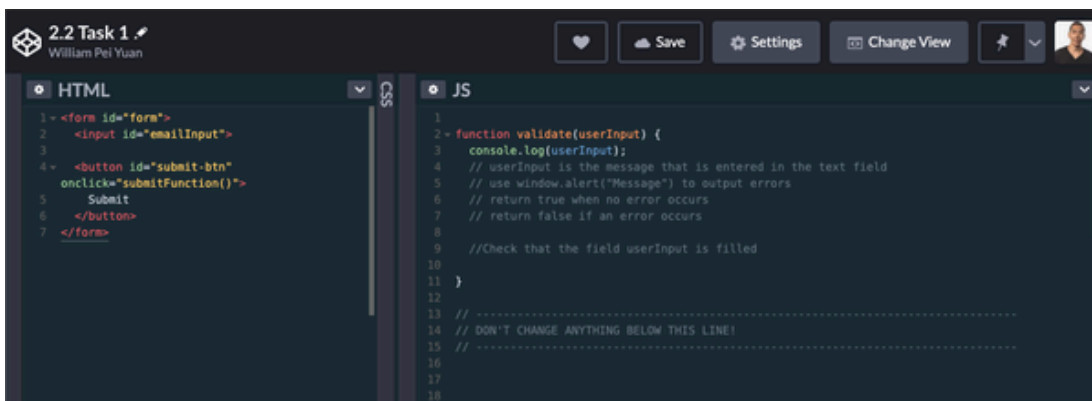

```

```

Ex 2.1 & 2.2 – Introduction to and Coding with JavaScript

Examine the structure of JavaScript code and the console log

Create a new file named "scripts.js" in the /js directory & load into HTML pages

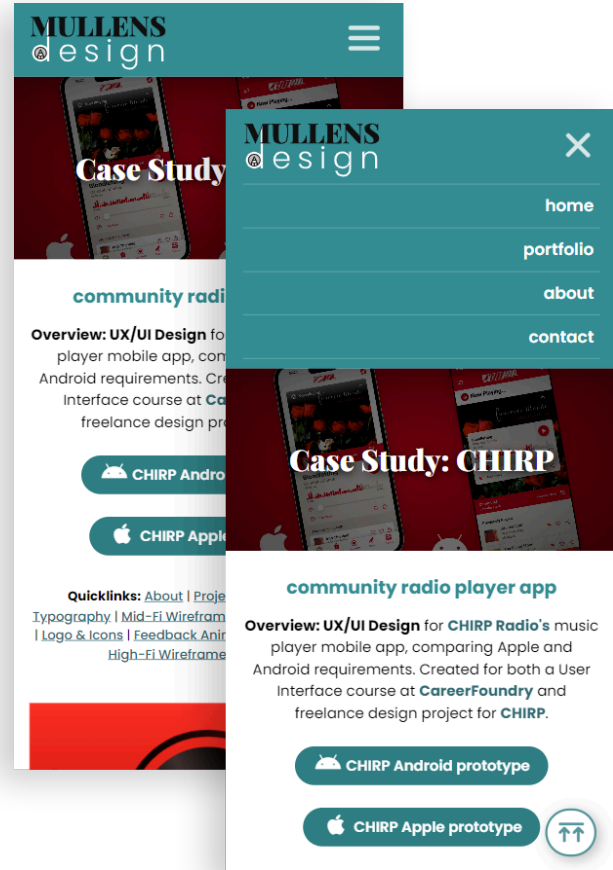

```
2.2 Task 1
William Pei Yuan
HTML
1 <form id="form">
2   <input id="emailInput">
3
4   <button id="submit-btn"
5     onclick="submitFunction()">
6     Submit
7   </button>
8 </form>
9
10
11
12
13
14 // DON'T CHANGE ANYTHING BELOW THIS LINE!
15
16
17
18
JS
1 function validate(userInput) {
2   console.log(userInput);
3
4   // userInput is the message that is entered in the text field
5   // use window.alert("Message") to output errors
6   // return true when no error occurs
7   // return false if an error occurs
8
9   //Check that the field userInput is filled
10  }
11 }
12
13 // -----
14 // DON'T CHANGE ANYTHING BELOW THIS LINE!
15 // -----
16
17
18
```

Task 2.3 – JavaScript Libraries & Plugins

1. Link jQuery to your pages using CDN option
2. Add more interactivity and animations to pages with jQuery
3. Using Javascript and jQuery, create a responsive mobile menu that can be toggled for screen sizes smaller than 641px
4. Add a hamburger menu icon and X icon and animate a transition between the two

```
JS scripts.js 1 X
js > JS scripts.js > navToggle
1 var faBars = $(".fa-bars");
2
3 var faX = $(".fa-xmark");
4
5 var navtoggleResponsive = $(".navtoggle responsive")
6
7 var navToggle = $(".navtoggle")
8
9 // if (document.getElementById('myNavtoggle')) {
10 //   // faX.hide();
11 // } else {
12 //   // faBars.show();
13 // }
14
15 function myFunction(x) {
16   x.classList.toggle("change");
17 }
18
19 function menuToggle() {
20   var x = document.getElementById('myNavtoggle');
21   if (x.className === 'navtoggle') {
22     x.className += ' responsive';
23   }
24   else {
25     x.className = 'navtoggle';
26   }
27 }
28
29 var myIndexC = 0;
30 carouselC1();
Ln 7, Col 32 Spaces: 2 UTF-8 CRLF
```

Exercise 2.4 – User Testing

1. Write a testing process for website
2. Submit test to several users; guide them through a walkthrough of the site
 3. Gather comments and insight from test subjects
 4. Make changes to website based on user feedback

Exercise 2.5 – Code Quality & Cross-Browser Testing

1. Utilize code linting to debug and check code quality
2. Test website across multiple browsers

3. Test all colors for Accessibility:

CONTRAST RATIO: 5.85:1 - ✓ WCAG AA: PASS

Exercise 2.6 - Finishing Up

1. Decide on a web hosting provider and domain name
2. Upload files to web server
3. Test, trouble shoot, and debug with final changes!

Thank you for reading through this case study!
